About E J Wheldon Plumbing & Heating:

I would like to introduce you to my business which specialises in all heating, plumbing and maintenance work. I am based in Northampton and cover the East Midlands and the surrounding areas. I am qualified and have worked with my family business which was established 40 years ago. I have over 15 years' experience working for both domestic and commercial establishments. I pride myself in offering prompt and reliable services. All my work is completed to the highest standard at a competitive price and comes with a 2-year guarantee as standard.

Visit my website @ <https://www.ejwheldon.co.uk> for more information.

What our customers say:

“E J Wheldon fitted our new heating system when we moved house. The quality of the work is excellent, they were extremely prompt and worked quickly. I would highly recommend.”

JoW-114

“I contacted Elliott in the hope of arranging my annual boiler service for the next few weeks and to my surprise he was able to visit the following day. He was friendly, informative and carried out the service without issue, would highly recommend and will definitely be using again next year when the boiler is due for its annual service.”

RodgerL-38

“Very happy with the prompt, efficient and professional work carried out by Elliott. I would definitely recommend him.”

Choosing Your Boiler

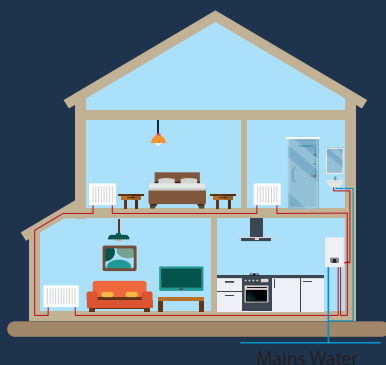

The first step is figuring out what boiler is going to work best for you, with so much choice out there this handy guide should help making that choice a little easier.

		Our summary	Your Choice
	Glow•worm ENERGY	<ul style="list-style-type: none">• Rear Flue Option• A rated Efficiency• 7 to 15 year manufacture parts and labour warranty• Easy maintenance• Outstanding aftercare• A-rated	
	Glow•worm ULTIMATE	<ul style="list-style-type: none">• Available in 30kw and 35kw models• 5 to 10 year manufacture parts and labour warranty• Leading combi boiler• A rated	
	 Vaillant	<ul style="list-style-type: none">• 7 to 10 years manufacture parts and labour warranty• Manufactured in the UK• Priority breakdown line• German engineering	
		<ul style="list-style-type: none">• Manufactured in the UK• 5 to 7 years manufacture parts and labour warranty• Which best buy	
	Alpha HEATING INNOVATION	<ul style="list-style-type: none">• High efficiency• 50 year innovation• 7 to 10 years manufacture parts and labour warranty• Easy to fit	

What type of system do I need?

Here's a handy guide to the type of system you may already have or which may be a better replacement for the system you're currently using.

Combination Boiler

Combination, or 'Combi', boilers, are the most popular type of boiler in the UK as they can be an extremely economical option, only heating the water you use.

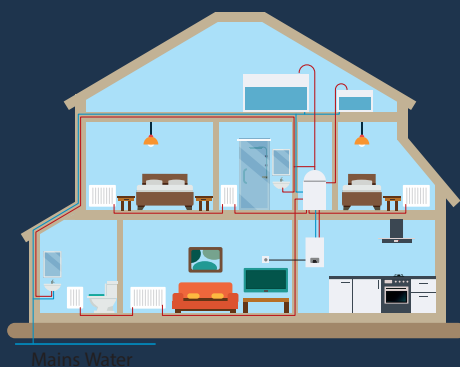

Pros:

- Unlimited hot water 'on tap' as it heats water straight from the mains.
- Save space as you don't need a cold water tank or hot water cylinder, perfect for a smaller house or flat.
- Usually quicker to install because there are fewer boiler parts than other heating systems.

Cons:

- Using more than one tap at a time can reduce the flow of hot water, though this also depends on the strength of your mains water pressure.
- Your water can take a few seconds to heat up.

Conventional Boiler

Conventional, regular, heat-only boilers, whatever you choose to call it this system works by sending hot water to your radiators and a hot water cylinder.

Pros:

- You can use lots of taps at the same time, without the flow of water getting weaker.
- You can have an electrical immersion heater fitted to your hot water cylinder to give you a back-up, just in case your boiler breaks down.
- They're great for larger homes with more than one bathroom.

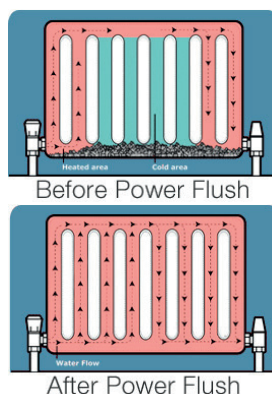

Cons:

- You need space for a hot water cylinder and cold water tank which is usually put in the loft.
- You need to plan when you want hot water, programming your boiler heat the water in the cylinder, so you have hot water when you need it.
- You only have as much hot water as your cylinder can hold. So if it runs out you'll need to wait for it to heat up again.

Included in your installation

Powerflush

This is a cleaning process to clear the build up of rust and other debris which can build up in your pipes and radiators. This metallic debris or 'sludge' can affect the efficiency of your heating system, causing cold spots in your radiators even after they've been bled.

Water Test Kit & Chemical Inhibitor

By testing your water we'll get an accurate understanding of your water quality helping us protect you against limescale and corrosion, two of the main culprits of system issues and breakdown.

Magnetic Filter

A magnetic central heating filter is installed onto the pipework of your boiler and filters the debris by using the magnet to attract sludge removing it from your system, maintaining efficiency and saving you money.

Limescale Reducer

This is fitted to the cold water mains and reduces the risk of a build up of limescale inside your boiler.

Carbon Monoxide Tester

For peace of mind, we fit and install a Carbon Monoxide tester with every new installation carried out.

Wireless Heating Controls

Smart heating systems allow you to control your home from anywhere in the world, here's a sample of what we offer.

MiGo

- The personal heating assistant
- Wi-Fi thermostat and easy-to-use app
- Manage heating and hot water from anywhere
- Reduces energy consumption, saves money
- Internet weather compensation
- eBUS communication

Climapro 2 RF Control

- Glow-worm's most innovative wireless programmable room thermostat
- Capable of room and weather compensation
- Two channel wireless programmable room thermostat
- Backlit display provides advanced user control and functionality
- 2 years standard warranty

Climapro 1 control

- Available wireless and wired
- Annual service reminder function
- Automatic update for summer and winter
- Simple and discreet
- Weather compensation ability (when used with optional outdoor sensor)

Climastat Room Thermostat

- Easy to use
- Extra low voltage
- Simple & discreet connection

Nest Thermostat

The Nest Learning Thermostat programmes itself and automatically helps save energy when you're away. Control it from anywhere using your phone, tablet or computer.
